?Current Trends in Biomanufacturing focuses on cutting-edge research regarding the design, fabrication, assembly, and measurement of bio-elements into structures, devices, and systems. The field of biomaterial and biomanufacturing is growing exponentially in order to meet the increasing demands of for artificial joints, organs and bone-fixation devices. Rapid advances in the biological sciences and engineering are leading to newer and viable resources, methods and techniques that may providing better quality of life and more affordable health care services. The book covers the broad aspects of biomanufacturing, including: synthesis of biomaterials; implant coating techniques; spark plasma sintering; microwave processing; and cladding, powder metallurgy and electrospinning. The contributors illustrate the recent trends of biomanufacturing, highlighting the important aspects of biomaterial synthesis, and their use as feedstock of fabrication technologies and their characterization, along with their clinical practices. Current Trends in Biomanufacturing updates researchers and scientists the novelties and techniques of the field, as it summarises numerous aspects of biomanufacturing, including synthesis of biomaterials, fabrication of biomedical structures, their in-vivo/ in-vitro, mechanical analysis and associated ISO standards.

A comprehensive and dedicated guide to automotive production lines, The Automotive Body Manufacturing Systems and Processes addresses automotive body processes from the stamping operations through the final assembly activities. To begin, it discusses current metal forming practices, including stamping engineering, die development, and dimensional validation, and new innovations in metal forming, such as folding based forming, super-plastic, and hydro forming technologies. The first section also explains details of automotive spot welding (welding lobes), arc welding, and adhesive bonding, in addition to flexible fixturing systems and welding robotic cells. Guiding readers through each stage in the process of automotive painting, including the calculations needed to compute the number of applicators and paint consumption based on vehicle dimensions and demand, along with the final assembly and automotive mechanical fastening strategies, the book's systematic coverage is unique. The second module of the book focuses on the layout strategies of the automotive production line. A discussion of automotive aggregate planning and master production scheduling ensures that the reader is familiar with operational aspects. The book also reviews the energy emissions and expenditures of automotive production processes and proposes new technical solutions to reduce environmental impact. Provides extensive technical coverage of automotive production processes, discussing flexible stamping, welding and painting lines Gives complete information on automotive production costing as well as the supplier selection process Covers systems from the operational perspective, describing the aggregate and master production planning Details technical aspects of flexible automotive manufacturing lines Methodically discusses the layout and location strategies of automotive manufacturing systems to encompass the structural elements Features topic-related questions with answers on a companion website

At the start of the twenty-first century, the Japanese financial system is undergoing a major transformation. This process is spurred by a sense of crisis. Dominated by large institutions, the Japanese banking system has suffered from serious problems with non-performing loans since the early 1990s, when the Japanese stock market and urban real estate market both crashed. Delays in responding to these twin asset bubbles, by both regulatory authorities and the banks themselves, made matters worse and led to a banking crisis in late 1997 and early 1998. Not anticipating this setback, in late 1996 the Japanese government inaugurated its Big Bang of comprehensive financial deregulation designed to complete the process of creating 'free, fair, and open financial markets'. Beginning in late 1998 and early 1999 the government finally embarked on a major rehabilitation of the Japanese banking system, including making available some Yen 60 trillion (approximately USD 500 billion) of government funds to recapitalize fifteen major banks, adequately fund the deposit insurance program, and write off the bad loans of nationalized or bankrupted banks. One result of this reform process is that the Ministry of Finance (MOF), which dominated Japanese financial system policy for most of the post-war period, has been stripped of most of its former regulatory powers. The purpose of this book is to describe, analyze, and evaluate the process that is transforming the Japanese financial system. The chapters address various issues relating to the transition of the Japanese financial system from a bank-centered and relationship-based system to a competitive market-based system. Questions taken up include: Why did Japanese banks get into such serious trouble? Why has the MOF lost its immense power? How will the Big Bang's financial deregulation further change the Japanese financial system, including the huge government financial institutions and postal savings system? What are some of the broader implications of this transition? The book is divided into three parts: Part I considers the origins of Japan's banking crisis; Part II focuses on five particularly important areas of major actual and potential changes; Part III addresses the effects of the Big Bang, including its potential systemic externalities. Taken together, this book offers an unusually up-to-date, comprehensive and thorough appraisal and evaluation of the profound changes occurring in Japan's financial system.

This paper describes economic developments in Grenada during the 1990s. The weak growth performance since 1990 reflected largely a continuous contraction in agricultural output, which declined each year from 1989 to 1993. The construction industry experienced a major contraction in 1992 owing to the sharp fall in public investment. In 1993, output declined in the mining and quarrying, construction, and manufacturing sectors as well as in agriculture. In contrast, the hotel and restaurant sector has exhibited strong growth since the late 1980s, with real value added growing by 13.8 percent, on average, each year since 1989.
